WTC

7

World Trade Center Building 7, a 47-story skyscraper NOT HIT BY AN AIRPLANE, was the third tower destroyed on 9/11.

The collapse of WTC 7 looks like a classic explosive **CONTROLLED DEMOLITION**:

- The building falls almost straight down in about 7 seconds – and at **free-fall acceleration** for 100 feet — per NIST
- The overall building mass falls uniformly **through the path** of what *was* **greatest resistance**. This requires a precisely timed patterned removal of critical columns.
- The kink in the roofline is characteristic of a **demolition timing sequence** that causes buildings to implode symmetrically by collapsing inward.

SMALL POCKETS OF SHORT-LIVED FIRES could not cause floor system failure by “thermal expansion” (NIST) in this modern fire-proofed steel-framed structure.

A single, localized failure (a girder unseated – NIST) could not cause the systematic & total **FAILURE OF 400 OTHER STRUCTURAL STEEL CONNECTIONS PER SECOND**.

Numerous incidents and recorded statements reveal FOREKNOWLEDGE. These include a countdown, warnings, and announcements from both CNN and the BBC of the collapse... before it happened!

Evidence Excluded from the NIST Report:

- 1 Most of the rubble from the implosion ended up in this neat pile — **centered within the original footprint**.

- 2 The 47-story steel-framed **structure was dismembered** and reduced to a small pile only a few stories high. The destruction was total and complete. Also, most of the **walls collapsed inward** — an unmistakable sign of a controlled demolition implosion.
- 3 **Hot spots in the rubble**, detected by NASA infrared imaging, persisted for weeks at temperatures far exceeding normal office fires.

- 4 **Evidence of melted steel** and “severe high temperature corrosion” documented in Appendix C of FEMA report. Problem: Office fires don’t melt steel. Further analysis revealed the signature of thermite — an incendiary that creates molten iron.

- 5 FEMA ordered the **destruction of evidence** at 400 truckloads per day prior to completion of their May 2002 report which concluded that the fires had only a “low probability” of destroying the building, and that “further investigation and analysis were required.”

WTC Twin Towers

WTC 1 & 2 exhibited many unusual characteristics of controlled demolition – including extreme explosiveness, symmetry, pulverization, and lateral ejection of debris.

- 1 **Constant acceleration** through path of what *was* greatest resistance — no time for "crushing"
- 2 **Improbable symmetry** of debris distribution
- 3 Extremely **rapid onset** of destruction
- 4 Over one hundred first responders reported **explosions & flashes of light**
- 5 Multi-ton steel sections **ejected laterally** 600 ft at 50 mph
- 6 **Mid-air pulverization** of 90,000 tons of concrete, metal decking, and floor trusses
- 7 Massive volume of expanding **pyroclastic-like clouds**
- 8 1200 foot-dia. debris field: **no "pancaked" floors found**
- 9 Isolated **explosive ejections** seen 20-40 stories below cascading demolition canopy
- 10 **Total building destruction:** dismemberment of steel frame
- 11 Several **tons of molten iron** found under all 3 high-rises
- 12 Evidence of **thermite incendiaries** found in steel and dust samples
- 13 FEMA **steel** analysis: sulfidation, oxidation and intergranular **melting**
- 14 **No precedent** for steel-framed high-rise collapse due to fire

The mushroom-like canopy exhibited upward and outward arching streamers in the first few seconds — a geometry of explosion, *not* gravitational collapse

The Truth is in the Evidence:

4 to 20-ton steel column/beam sections were severed at their connections and hurled at 50 mph into the sides of neighboring buildings two football fields away.

FDNY and others found several tons of **molten metal** "flowing like lava" under all 3 high-rises. 1400°F office fires cannot produce 2700+°F molten metal — without thermite incendiaries.

Microspheres formed from molten iron with traces of aluminum and manganese (the byproduct of thermite) were found in the WTC dust by USGS, an environmental firm and independent physicists.
